In 1982, Honeywell decided to develop its own, more affordable, CAD system, and Autodesk was hired to do so. Autodesk delivered the first version of AutoCAD in December 1982. Since then, Autodesk has released updates every year for the program and has continued to enhance it. The price for a single user license has gradually decreased from $395 in 1982 to the current price of $1899. AutoCAD became the most popular commercial CAD program in the world, overtaking earlier Cadsoft Software products. It also attracted business-to-business CAD users from other companies. In 1989, Deloitte Consulting estimated that Autodesk's market share had grown to almost 30% of the total CAD market. This was largely due to the introduction of AutoCAD LT, a version of AutoCAD for use in low-end desktop environments and workgroups. The most significant technical innovation of AutoCAD was the introduction of a "native" or native application programming interface (API) by version 7, which enabled AutoCAD to run the same as other Windows applications. It also made it possible to mix native and non-native programs, both of which could share their applications programming interface (API). In 1992, Autodesk developed AutoCAD MEP (Microelectronics and Mechanical Engineering), an AutoCAD program designed for use with tools specific to the manufacturing sector. In 1993, Autodesk introduced AutoCAD R14, the first version of AutoCAD available in both Mac and Windows versions. In 1996, Autodesk introduced the "AutoCAD Assistant," an online digital library of tutorials, drawings, and other resources for AutoCAD users. In 1998, Autodesk released the first version of AutoCAD for mobile devices. In 2004, Autodesk introduced AutoCAD LT Mobile Edition, a mobile app for the iPhone. Autodesk acquired TrueForm, a French company, in 2001, but subsequently withdrew from this business. In 2003, the company launched AutoCAD 2004, the first version of
